DETAILED ACTION

Specification

1. The disclosure is objected to because of the following informalities: Applicant is requested to amend the specification by inserting section headings such as "Summary of the Invention" and to add a "Brief Description of the Drawings." In line 7 of page 2, "hexausted" should be changed to "exhausted." In line 3 of page 11, "ivnention" should be changed to "invention." In line 3 of claim 12, "fed" should be changed to "feed." The remainder of the specification should be checked for other misspellings.

Appropriate correction is required.

Claim Rejections - 35 USC § 112

- The following is a quotation of the second paragraph of 35 U.S.C. 112:
 The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 3. Claims 4-7 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. In claims 5-7, the word "one" is indefinite because it is unclear what is being referred to.
- 4. Claim 4 recites the limitation "the used absorption column" in line 1. There is insufficient antecedent basis for this limitation in the claim. The recitation can be changed to "the scrubber" to overcome this rejection.
- 5. Claim 6 recites the limitations "the gas absorption phase fresh solution" and "the plant" in lines 6-7. There is insufficient antecedent basis for these limitations in the claim.

Application/Control Number: 10/620,418 Page 3

Art Unit: 1724

6. Claim 7 recites the limitation "the absorption column" in line 2. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

7. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 8. Claims 1-6, 8, 10 and 11 are rejected under 35 U.S.C. 102(e) as being anticipated by Jones et al. (2002/0151748).
- 9. Jones et al. '748 teach a process for recovering flurorinated carboxylic acid surfactants, comprising contacting an exhaust gas stream containing perfluorooctanoate with a scrubbing solution that can be water or an aqueous solution substantially free from ionic impurities continuously in a scrubber, followed by recycling the solution for further contact after recovering the surfactant using an alumina adsorber. The temperature of the scrubber solution is between 5-90° C and the concentration of fluoride in the recovered surfactant solution is less than about 10 ppm (paragraphs 13, 16-19). The concentrated scrubber solution has a pH of 3.5 in an example (paragraph 32). The water or aqueous scrubber solution being free from ionic impurities will inherently have a density near 1.00 g/cm3.

Claim Rejections - 35 USC § 103

10. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Application/Control Number: 10/620,418

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 11. Claim 12 is rejected under 35 U.S.C. 103(a) as being unpatentable over Jones et al. '748.
- Jones et al. '748 disclose all of the limitations of the claim except that the ratio by weight among the flow rates of the feeding aqueous solution and feed gas is from 2-20. Absent a proper showing of criticality or unexpected results, the ratio of flow rates is considered to be a parameter that would have been routinely optimized by one having ordinary skill in the art at the time of the invention based on the desired rate of contact and removal efficiency.

Allowable Subject Matter

- 13. Claim 9 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. Note that the other recovery methods in claim 8 must be removed when including base claim limitations.
- 14. Claim 7 would be allowable if rewritten to overcome the rejection(s) under 35
 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims. Note that the continuous operation must be removed when including the limitations of claim 5.

Conclusion

15. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The additional references listed on the attached PTO-892 form disclose methods for separating fluorine compounds from a gas mixture.
